> **Warning**: This utility is considered **experimental** however it is recommended to use this over manual rebase commands.

A command-line utility that assists with **rollbacks**, **rebasing**, and **information on your current image**.

Open a host terminal and **enter**:

```
bazzite-rollback-helper
```

Options are available to the user:

- `list` = List images from the last 90 days that can rebased to.
- `rollback` = Rollback to the previous deployment on next reboot.
- `current` = Show information about your current deployment and image.
- `rebase` = Switch to another build, update branch, or a different Fedora image **at your own risk**.
